

Presentation Handout

We will be spending three classes doing presentations about our final papers. This will give students an opportunity to share their work with colleagues and classmates plus begin to grow accustomed to the presenting in front of classes. I have randomly selected the following students for each day. You must be present for the day you are speaking or you will receive a zero. Your presentations should be about five minutes in length. Try not to go any longer. I would like you to cover:

- Your topic: Briefly summarize your research
- What approaches worked for you
- What approaches did not work for you
- Problems you encountered which you were able to get past
